

Single subject QC report generated using eddy quad v1.4.2

When using eddy and its QC tools, we ask you to please reference the papers describing the different aspects of the modelling and corrections. The following suggestion for a methods section and list of references has been tailored for you based on your eddy command line.

METHODS
The susceptibility induced off-resonance field was estimated from spin-echo EPI images acquired with different phase-encode directions (Andersson et al., 2003). This field was passed to "eddy", a tool that combined it with estimating gross subject movement and eddy current-induced distortions (Andersson & Sotiropoulos, 2016).The quality of the dataset was assessed using the eddy QC tools (Bastiani et al., 2019). Slices with signal loss caused by subject movement coinciding with the diffusion encoding were detected and replaced by predictions made by a Gaussian Process (Andersson et al., 2016).

Volume-to-volume motion

Average abs. motion (mm)	0.49
Average rel. motion (mm)	0.20
Average x translation (mm)	-0.02
Average y translation (mm)	0.44
Average z translation (mm)	0.02
Average x rotation (deg)	0.05
Average y rotation (deg)	-0.00
Average z rotation (deg)	-0.01

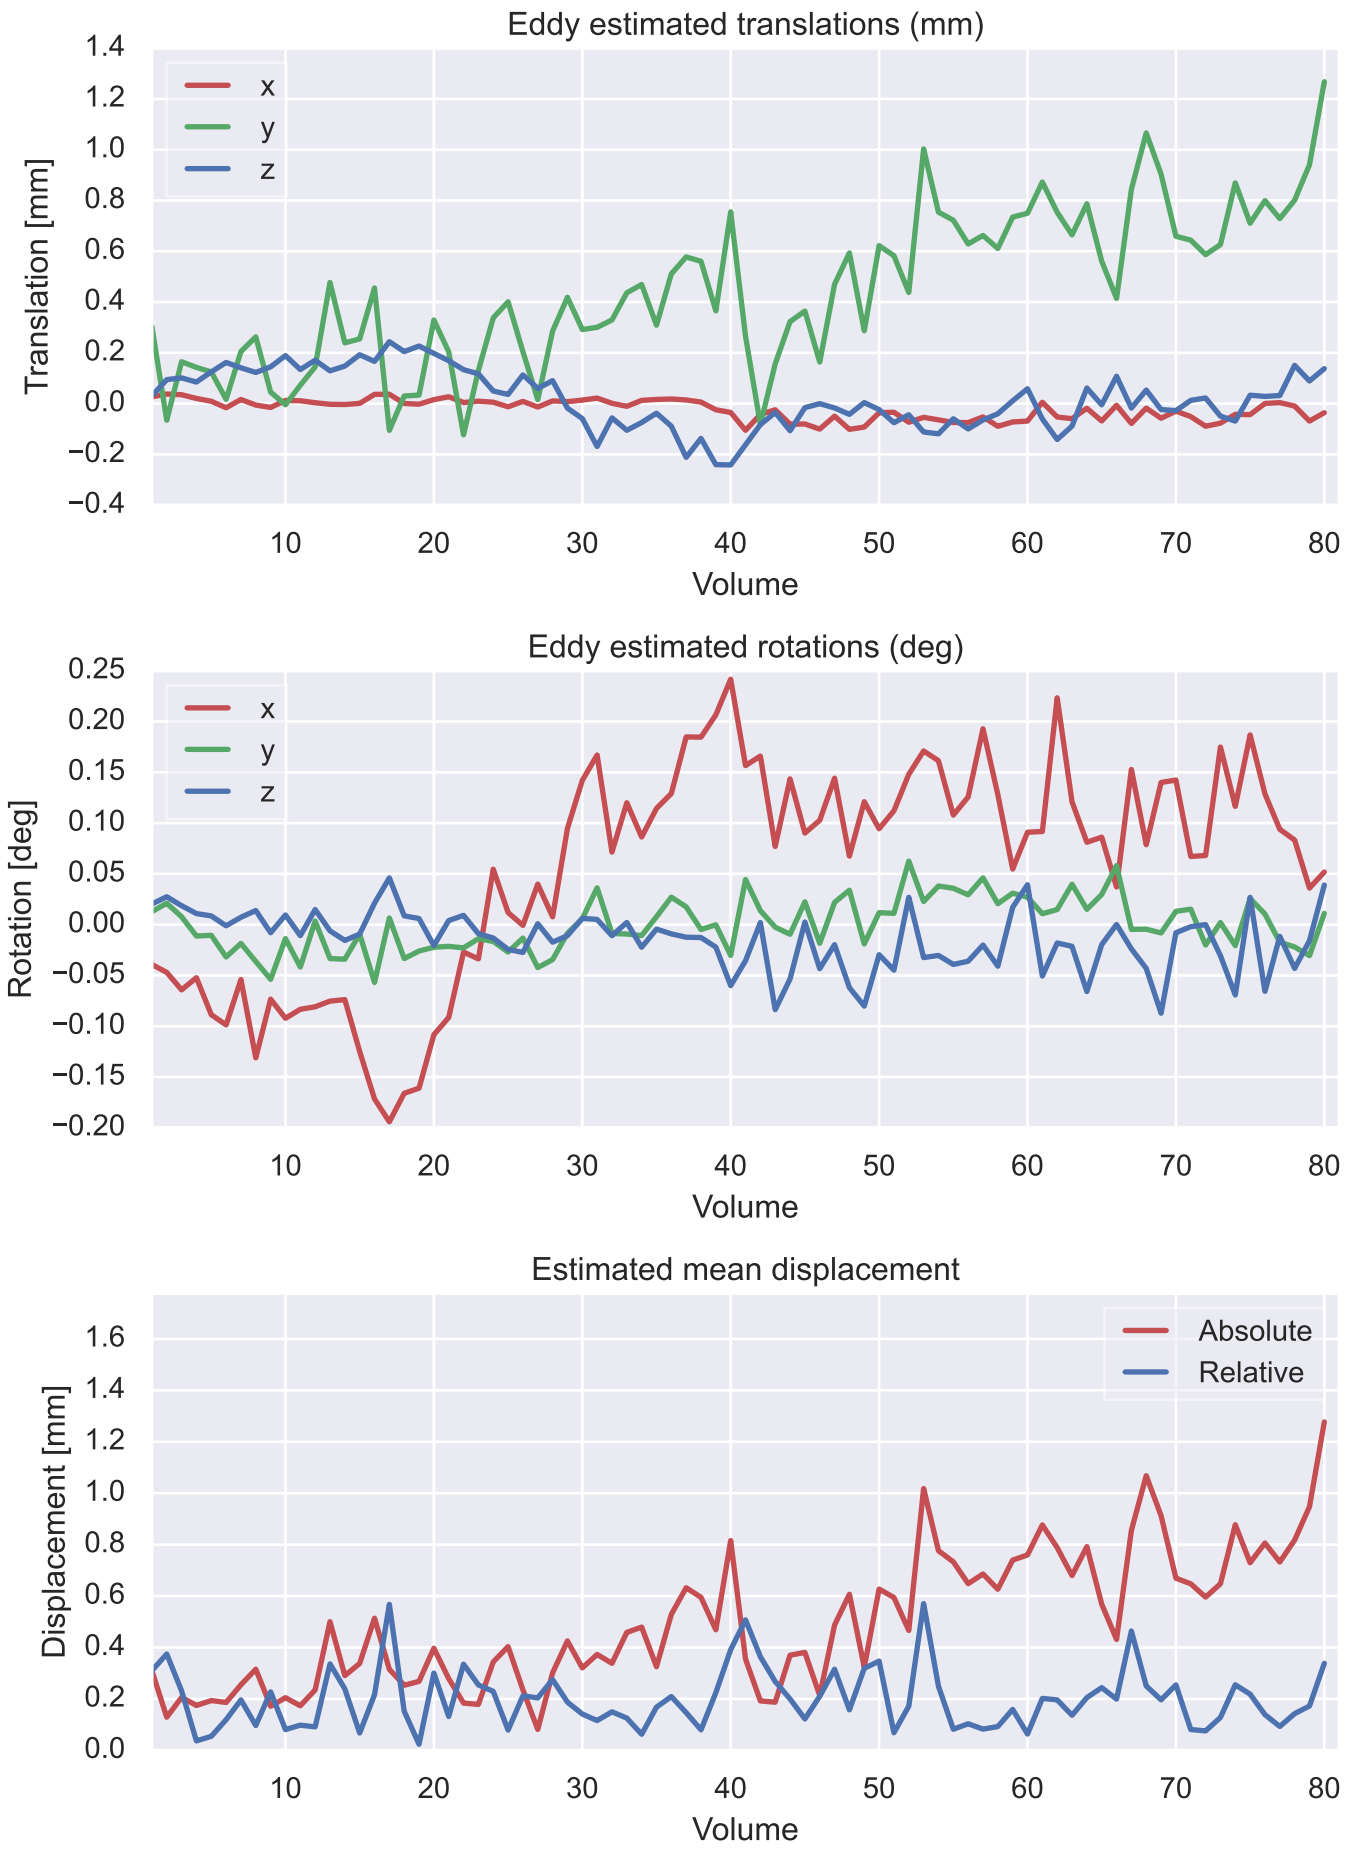

Outliers

Total outliers (%)	0.10
Outliers (b=1000 s/mm^2)	0.10
Outliers (b=2000 s/mm^2)	0.10
Outliers (PE dir=[0. 1. 0.])	0.10

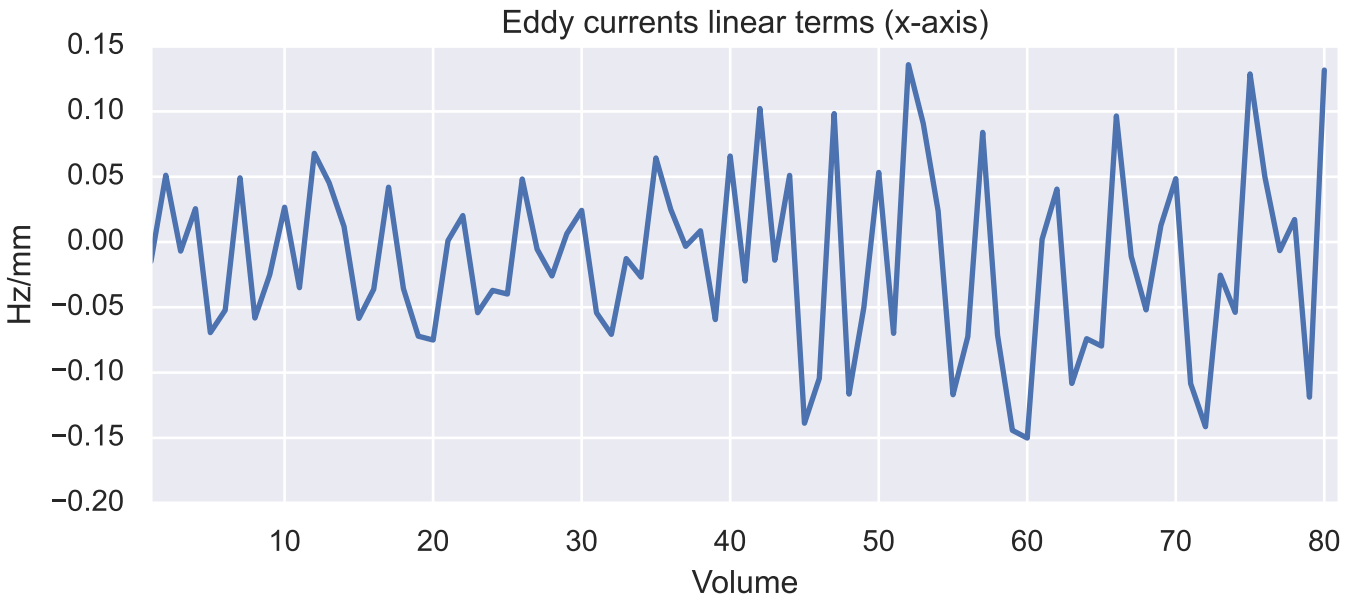

Eddy currents

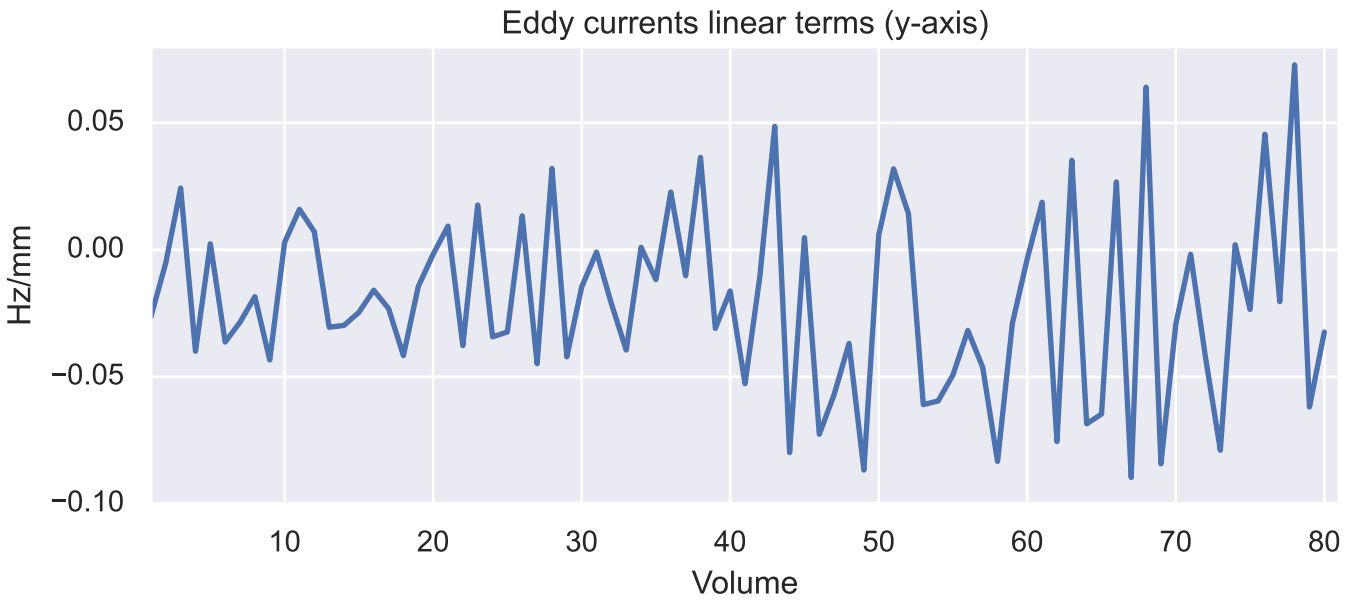

Std Dev EC linear term (x)	0.07
Std Dev EC linear term (y)	0.04
Std Dev EC linear term (z)	0.04
